

Evidence-Based Cancer Control Programs

Transforming Research into
Community and Clinical Practice

Evidence-Based Cancer Control Programs (EBCCP)

is a searchable database of cancer control interventions and program materials. Program planners and public health practitioners can easily access a range of tools, such as:

- Peer-reviewed interventions and associated materials
- Full program summaries
- User reviews
- An online interactive training curriculum for using evidence-based approaches
- Links to the *Guide to Community Preventive Services*, which provides recommendations for interventions that promote public health

Add Your Program to Our Database

We are always adding to our listing of evidence-based programs and want to hear from you!

Eligibility

Your program must include:

- Interventions conducted within the past 10 years
- Interventions with English-language materials that practitioners can use in a US community or clinical setting
- Evidence that is demonstrated in at least one study using an experimental or quasi-experimental design
- One or more positive behavioral or psychosocial outcomes ($p \leq 0.05$) among individuals, communities, or populations
- Findings published in a peer-reviewed journal

Featured Program Areas

- Breast Cancer Screening
- Cervical Cancer Screening
- Colorectal Cancer Screening
- Diet/Nutrition
- HPV Vaccination
- Informed Decision-Making
- Lung Cancer Screening
- Obesity
- Physical Activity
- Prostate Cancer Screening
- Public Health Genomics
- Sun Safety
- Survivorship and Supportive Care
- Tobacco Control
